

# Odds Ratio of Tweets in Singapore (2012-2015)

A Map by **Basil R. Yap**

Map Data from **twitter.com**

The higher the odds ratio, the more significant the number of tweets in 2012 as compared to 2015.

It can be observed that in areas of tourism and ongoing development, there is a trend of significantly lower odds ratio values.

This can be interpreted as a higher percentage of people visiting the areas in 2015 as opposed to 2012, possibly a result of intelligent design.
